

UNIVERSAL BARCODE SCANNER HOLDER WITH ADJUSTABLE ARM BLACK

The new **universal barcode scanner holder** uses its **small size** and **flexibility** to free up additional space at your work environment. Its **ergonomic design** will satisfy even the most demanding work spaces.

This barcode scanner holder is designed so it can cradle most of the scanners to **free up much needed space** on your desk.

The minimalistic design helps for **easy and fast assemble**. The product includes a **footing part** which carries **2 holes** for optional instalment on vertical surfaces (wall, desk side, etc.), a **scanner cradle** which will fit most of the handheld scanners and a **flexible arm** that connects the footing with the cradle and will keep your desired bend for **optimal work flow**.

Install the Barcode scanner holder and let it cradle a handheld scanner that has been set to **continuous triggering** (no necessary input to scan). Afterwards, **bend the arm** to the desired position and just pass product barcodes in front of the scanner. This way you have transformed your scanner into a **hands-free scanning device**.

We recommend to pair this barcode scanner holder with the **NSP BS01 BARCODE SCANNER**

“Creates free space even on the most demanding work environments”
